

# PRESERVATION<sup>®</sup>

STEEL SIDING WITH KYNAR 500<sup>®</sup>

*With its* ULTRA-RESILIENT COLOR TECHNOLOGY

IT'S BUILT  
WEATHER-TOUGH!

# DISTINGUISHED FOR ITS EXCEPTIONAL STRENGTH

## HIGH DURABILITY AND LOW MAINTENANCE

Preservation Steel Siding with Kynar 500's high-performance strength stands up strong to outdoor elements. Unlike fiber cement or wood products, steel siding won't absorb moisture and requires no caulking. The heavy-duty Galvalume® AZ-50 steel construction also delivers high dimensional stability and resists buckling and the wavy appearance that can result from expansion and contraction caused by extreme weather changes.

- Smooth, straight wall lines help conceal flaws in the exterior's substructure
- Resists damage from harsh winds; independently tested to withstand intense winds
- Excellent fire, hail, impact and termite resistance
- Easy to install; tight joints keep overlaps neat and flat
- Recyclable and requires no additional painting or caulking

## KYNAR 500 – ULTRA-RESILIENT STEEL COATING

When it comes to steel coating systems, the power of Kynar 500 stands clear in its outstanding resistance to the challenges of time and nature. The resilient finish preserves the steel core and creates a luxurious color that resists chalking, pitting, chipping, premature aging and more.

- Keeps colors beautiful and true with fade-defying fluorinated polymer pigments
- Resists staining, dirt and airborne pollutants which affect most other types of siding
- Easy upkeep – no caulking, scraping or painting required
- Kynar resists mildew and fungus growth; does not have UV-sensitive organic material required for mildew growth

## SUPERIOR STRENGTH FOR SUPERIOR RESULTS

Preservation Steel Siding's yield strength has been tested and proven to perform with impressive results.

**Yield Strength** is the force (tension, compression or shearing) that is applied to a material and results in some type of material deformation; the material does not fail and it may return to its normal shape when the force is removed: Preservation Steel Siding with Kynar 500 YS is 35,000 pounds per square inch.

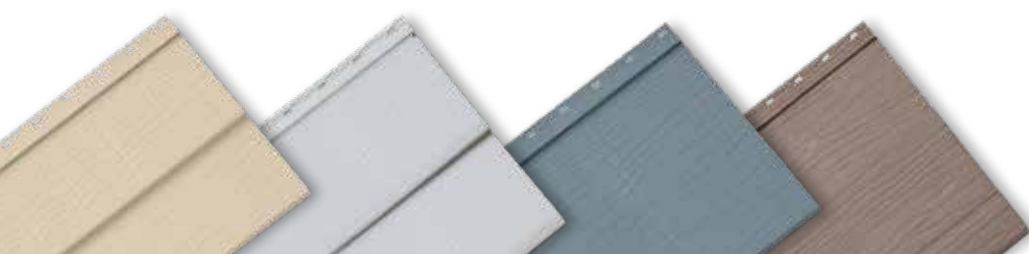

## LIFETIME LIMITED WARRANTY PROTECTION

Preservation Steel Siding with Kynar 500 is backed by a lifetime limited, non-prorated, transferable warranty including 35 year chalk and fade and 50 year hail protection.\* For complete warranty information, including limitations, please see the Preservation Steel Siding warranty.

## LUXURIOUS COLORS

Colors may be slightly different from their appearance in this brochure. Make final color selections using actual product samples.

Left to right: The double 4" clapboard, double 5" clapboard and 8" clapboard feature a roughsawn texture, while the 12" vertical board and batten has a medium woodgrain texture.
