Where BEAUTY and FUNCTION MEET

MEETS ENERGY STAR[®]
MOST EFFICIENT CRITERIA
FOR TAX CREDITS¹

RECOGNIZED AS ENERGY STAR MOST EFFICIENT

THE PRESERVATION COLLECTION IS NOW AVAILABLE WITH OUR SPECIALLY FORMULATED ENERGYMAXX 7 PRIME GLASS PACKAGE THAT MAY HELP QUALIFY FOR FEDERAL TAX CREDITS

Preservation Windows and Illuminations® Sliding Patio Doors² have earned the ENERGY STAR Most Efficient 2023 designation for meeting rigorous ENERGY STAR criteria, which includes achieving highly efficient U-Factor and SHGC (Solar Heat Gain Coefficient) performance in all U.S. climate zones. Reduce your fuel consumption for heating and cooling your home all while meeting requirements that may qualify your windows for federal tax credits.

ENERGYMAXX 7 PRIME'S EXCEPTIONAL DESIGN

Built to precise specifications, this impressive triple-pane unit incorporates insulating components and glass technology for outstanding protection against energy loss.

1. Low-E Glass
2. Argon Gas
3. SST™ Spacer

GREATER INSULATION WITH ARGON GAS

- EnergyMaxx 7 PriME features argon gas between the panes of glass for a more cost-effective thermal barrier compared to krypton gas.
- Heavier than air, insulating argon gas increases the energy efficiency of your windows and helps them qualify for tax credits.

HIGH-PERFORMANCE SST SPACER SYSTEM

The spacer system in your window is designed to increase the energy efficiency of the triple-pane unit, as well as stabilize the panes of glass to help prevent any subtle movement.

- Highly durable structural foam spacer creates a “warm” low-conductive edge.
- Non-metal design removes any metal-to-glass contact, increasing the edge of the glass temperature for greater energy efficiency.

YEAR-ROUND COMFORT

EnergyMaxx 7 PriME glass incorporates microscopically thin, low-emissivity (Low-E) coatings that repel the sun's heat and damaging rays in summer and reflect your home's heat back into the room in winter.

THERMAL PERFORMANCE³
