WINDOW BENEFITS

Beveled exterior masterframe features a premium vinyl construction that's beautiful, durable and virtually maintenance-free.

A technologically advanced method of construction that delivers superior strength and produces full-contact welding points.

Adds extra strength to the sash meeting rail to help prevent flexing during heavy winds.

High-density carbonized polystyrene foam enhancement in both sash and masterframe.

Expertly crafted to provide a highly efficient drainage system that promotes water runoff without the use of weep holes.

Creates a super-tight seal against air infiltration, providing greater insulation and comfort.

Structural foam design reduces the path of energy loss far more efficiently than other types of spacers.

Features UV-filtering, multiple-layer Low-E glass with argon or krypton gas.

For superior strength and lifelong ease of operation (casements only).

Solid wood mullions enhance structural integrity, while a protective internal sill pan component provides effective water mitigation.

Your home will be warmer in the winter and cooler in the summer with less energy spending.

Designed to help conserve energy and reduce consumption of fossil fuels used for heating and cooling homes; high-quality products with a long lifespan can also help lessen your impact on the environment.

Heavy-duty, multichambered vinyl construction combined with insulating gas in the glass unit helps soften outside noise.

Including glass breakage; a written pledge of lasting quality and value.
